PROJECT IDEA

This project is developed in order to digitalize the Abhisheks which are carried out at scared Temples of lord Shiva. In this pandemic situation its been difficult for peoples to go there and register for pooja or havan so our system will allow the general people living far away from these places to register for pooja/havan without reaching there physically.

They will just need to register themselves to the system by inputting the basic credentials. After that the individual is verified by the system during login, the user is able to login to the system using login credentials as per registration and then he/she is eligible for havan at any of 5 jyotirlinga of Shiva.

The system's database has all control of the previous havan donation etc. done by user. The user after filling form will be able to go for payment by scanning the QR Code.
